

What would you do if your server just **died** ?

Could you have it back up running again in minutes,
to the exact state as of 15 minutes ago?

With ShadowProtect you can!

STORAGECRAFT.
Backup Fast, Recover Faster

10 Reasons...

Why you should choose StorageCraft ShadowProtect™ v4 to maximise your business continuity and minimise your Recovery Time Objective.

1

Lower Your Recovery Time Objective

Greatly decrease the time needed to restore a system after it has failed with StorageCraft's near instant Disaster Recovery solutions that can restore an entire Windows Server or Workstation in minutes, even when dealing with terabytes of data.

2

Real-Time Data Protection

ShadowProtect enables companies of all sizes to protect their data and databases using the latest in "Set & Forget" Real-time imaging technology. Data loss can be minimised to under 15 minutes - instead of losing hours or days worth of data or database transactions.

3

NEW - HeadStart Restore

Dramatically shrink the time needed for system recovery even when dealing with terabytes of data. HSR automatically recovers your point-in-time backup images to a virtual machine. In the event of a system failure simply finalise the recovery and boot the system to a .VHD or .VMDK file for near-instantaneous system recovery.

4

NEW - VirtualBoot

Boot any ShadowProtect disk image as a virtual machine for near instant on-site disaster recovery in minutes - even when dealing with terabytes of data - allowing a company to continue functioning while the physical server is repaired and recovered.

5

Hardware Independent Restore (HIR) Technology

Using HIR organisations of all sizes now have a single backup, disaster recovery and migration tool in one intuitive and affordable solution. In just minutes and at the click of a few buttons the HIR feature allows you to perform bare metal recovery and P2P, P2V, V2P and V2V migrations for all your backup, Disaster Recovery, hardware upgrades and test environment needs.

6

NEW - Offsite Replication

ImageManager Enterprise offers offsite replication via FTP to secure your backup to a remote location. Combined with ShadowProtect's continuous incremental option, you can quickly and easily send the small backup image files, made every 15 minutes, to a secure offsite location.

7

NEW - Management Console

Save time & money - the new Management Console can push install ShadowProtect simultaneously to all physical or virtual machines on a network. It also simplifies your backup management, lets you check the status of your backups and import or export system information.

8

Real-Time Exchange & SQL Backup and Recovery

Protect your Exchange and SQL data every 15 minutes with minimal disruption to users. Typically never lose more than 15 minutes of e-mails or transactions after a system crash or corruption. Rebuild your complete SQL server in minutes rather than hours, or migrate to a entirely new hardware using the HIR feature.

9

Reduced Cost & Complexity

StorageCraft offers an affordable solution for backup, recovery, disaster recovery and migration that delivers true and rapid ROI. Intuitive wizards reduce complexity and make setting up a backup job and performing a disaster recovery extremely easy.

10

Superior Reliability

ImageManager verifies and re-verifies backup image chains to ensure that backup images are in a known good state to guarantee fast and reliable recovery. The Notification feature automatically informs you via email should anything go amiss with a backup job.

**Fast and Reliable
Disaster Recovery,
Data Protection and
System Migration for
Windows Servers and
Workstations**

**Leading the way to
safer computing**

StorageCraft lead the Real-Time Recovery market segment with over 1,000,000 installations of their Real-Time Recovery engine - Volume Snapshot Manager.

StorageCraft ShadowProtect™ is the flagship solution that provides typically sub 12-minute Disaster Recovery (Bare Metal Restore) of a Windows™ system & Real-Time Data Protection.
